

2. REQUIREMENT ANALYSIS

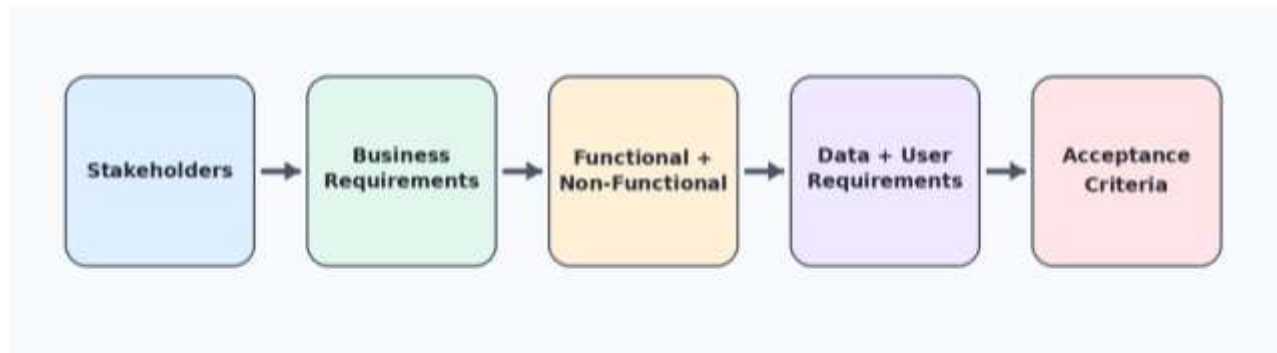

ServiceNow-Based Employee Laptop Request Application

Prepared By: Nadakuditi Bindu

2.1 Requirement Objective

The requirement analysis defines what the application must provide to employees, managers and the IT team. Requirements are organized into business, functional, data, security and non-functional areas so they can be implemented and tested.

2.2 Requirement Analysis Workflow

2.3 Business Requirements

ID	Business Requirement	Expected Outcome
BR-01	Provide one platform for laptop requests	Centralized submission
BR-02	Capture employee and request details	Complete request record
BR-03	Differentiate Basic and Advanced requests	Controlled classification
BR-04	Prevent more than one request per employee per year	Policy enforcement
BR-05	Provide manager approval	Controlled decision
BR-06	Track request status	Lifecycle visibility
BR-07	Notify employees of decisions	Clear communication

2.4 Functional Requirements

ID	Function	Requirement
FR-01	Submission	Employee can submit a Laptop Request.
FR-02	Data Capture	Request stores requester, email, date, description, manager, type, status and reason.
FR-03	Validation	System checks for an existing request from the same employee in the current year.
FR-04	Approval	New valid requests are sent to the employee's manager for approval.
FR-05	Decision Handling	Approved requests become Approved; rejected requests become Rejected.
FR-06	Notification	Employee receives approval or rejection email.
FR-07	Security	Roles and ACLs control read, create and write access.

2.5 Data Requirements

Field	Type	Purpose / Allowed Value
Number	Auto Number	Unique request identifier
Requester	Reference	Employee submitting request
Employee Email	Email	Contact email
Request Date	Date/Time	Submission date
Short Description	String	Request summary
Manager	Reference	Approving manager
Type of Request	Choice	Basic / Advanced
Status	Choice	Pending Approval / Approved / Rejected
Reason	Choice	Software Development / Personal Use / Other

2.6 User and Security Requirements

User	Required Access
Employee / it_employee	Read, Create and Write permitted request records
Manager / it_manager	Read/view request records and participate in approval
Application Security	Use groups and ACLs to enforce role-based access

2.7 Non-Functional Requirements

- Usability: provide a straightforward employee-facing request interface.
- Security: apply role-based access and ACL controls.
- Consistency: use controlled choice values and validation.
- Maintainability: keep application configuration organized in a scoped application and Update Set.
- Traceability: maintain identifiable request and approval records.

2.8 Requirement Acceptance Focus

Requirement	Acceptance Check
Request submission	A valid employee request creates a record.
Duplicate prevention	A second request in the same year is blocked.
Approval	A valid request reaches manager approval.
Status	Approval outcome changes the request status correctly.
Notification	Employee receives the appropriate decision email.
Security	Manager and employee permissions match the configured ACLs.
